Brief Company Profile

Please visit our website for more detail.

Introduction

Bergland Tuine (PTY) LTD was founded by Mr. G.L. Roos in 1970 – one of the very first instant lawn / Turf producers in the Southern hemisphere.

Since the beginning, Bergland has produced top quality turf on international level throughout the year, and built the reputation of the best quality turf supplier in Gauteng. Due to our setting, green lawn is supplied throughout the year.

Demands / trends set in the industry and diversification led to a few interesting business units. These units all make part of one great company, and they are:

- A. Turf supplies
- B. Complimentary products
- C. Contracting and landscaping
- D. Cut flower supplies
- E. Specialised machinery

A. Turf supplies

Bergland produces 200Ha pennisetum clandestinum (Better known as Kikuyu) turf per annum. We supply a weed -, fungus – and insect free product that is actively growing.

The lawn is supplied in 460mm x 740mm slabs, three slabs per square meter. All harvesting operations are done by specialised Kesmac harvesters, cutting all sod the same size and thickness. All grass harvested is palletised for the convenience of delivering your grass where it is required. Therefore, you save the labour and handling content. Grass laid on properly prepared soil base establish within 14 days.

We also produce products that compliment the green industry such as compost, topsoil, lawn dressing and specialised soil mixture for any landscape requirement. (Dobsonville stadium special drainage mixture.)

B. Complimentary products

We produce complimentary products to the green industry, municipalities and public. We do compost, lawn dressing and topsoil in bulk or small orders. We do special soil mixtures to meet specific requirements such as drainage, moisture retention and consistency. You name the requirement – we make it. (Turfontein racetrack, Dobsonville stadium soil base, Orlando stadium soil base, Krugersdorp Golf Course special green mixture, etc.)

C. Contracting and landscaping

The unit began as a measure to introduce lawn sod to the industry. With the western bypass, Sun City and various other municipal works to be grassed in a very short period of time, with no knowledge of turf in the industry.

We have grown to a fully equipped division that specialises in the design and construction of parks, sports grounds, golf courses, commercial landscaping, plantscaping, landscape design and irrigation design and installations.

We are proud to confirm more than seven hundred and fifty sports facilities developed in the history of the company and that we are the main appointed contractor for sport and recreational works by the City of Johannesburg the last eleven years running.

The division have always done extensive earthworks to succeed in this task and is in the current phase of expanding to a separate entity of civil works led by an in house civil engineer.

D. Cut flower supplies

We produce a variety of products to supply the local and export market. We specialise in foliage products and produce Protea cut flowers in the Hekpoort area. We currently produce more the 18 varieties grown on four farms.

We propagate all our own plants and grow a limited selection of plants for landscaping usage.

Devotion to produce the best possible stem length, shelve life and cost effective production lead to continuous research with the University of Pretoria. Trials are done on hydroponics, tissue culture and nutritional balances to determine the perfect fertigation requirement. All result will be published and be made available worldwide.

E. Specialised machinery

Throughout the process, starting with the very first steps of production to the very last final finish of a contract, Bergland uses sophisticated machines and equipment to ensure quality work. Newer and better technologies lead to the discovery of our latest additions. A Rota-Dairon rotovator, an Agri-vator ground compaction core reliever with over seeding attachment, a sprig planter capable of planting 20000m²/day at a ratio of 5:1, and a specialised herbicide/fertilizer applier. Newer type levelling blades unsure the sports ground surface never seen before.

We own a range of loaders, skid steers, trucks and plant equipment to ensure that our earthworks are done on time, within scope of work and on the best possible quality achievable.

Our mission

To deliver the best product and service at the most cost effective way possible to our client, and to build healthy business relations in the industry that knows us by reputation.

Track record 2007-2008:

- City of Johannesburg, Main contractor for Sport and recreation. Sue Robertson 0825593828
